

Next generation short climbing skins intended for centre installation. The new Skin Protector reduce friction, and increase speed. At the same time protects against wear and tear from sharp snow crystals.

For more than 20 years Åsnes has offered a solid solution for short climbing skins, constructed for rough mountain terrain. Superior quality and a solid construction is proved by numbers off hard expeditions.

Introducing the new X-skin. Åsnes has kept the principal of construction, however improved the integration between ski base and climbing skin.

The new X-skin is adapted to fit in all new and old Åsnes skis with a skin insert.

Keep on exploring the great outdoor!

SKIN X PROTECTOR

- SECURE ATTACHMENT
- SKIN PROTECTOR REDUCES WEAR AND TEAR
- EASY TO MOUNT AND REMOVE
