■ INCLUDED IN KIT // ■ ADDITIONAL STRUCTURES AVAILABLE

*00-G is a smooth blank with a gear for detuning.

**00-P is used as front roller in FPB-D tool body when running a single structure roller in back.

Each structure roller is made to the same overall dimensions; with a total of 7 geared and 7 press structure rollers. All structure options can fit into our flagship model the FINITE FINISH tool body. The pressBOX-D and pressBOX-S offer a robust tool platform for applying press structure options.
